

Introducing the Biotechnology DSC!

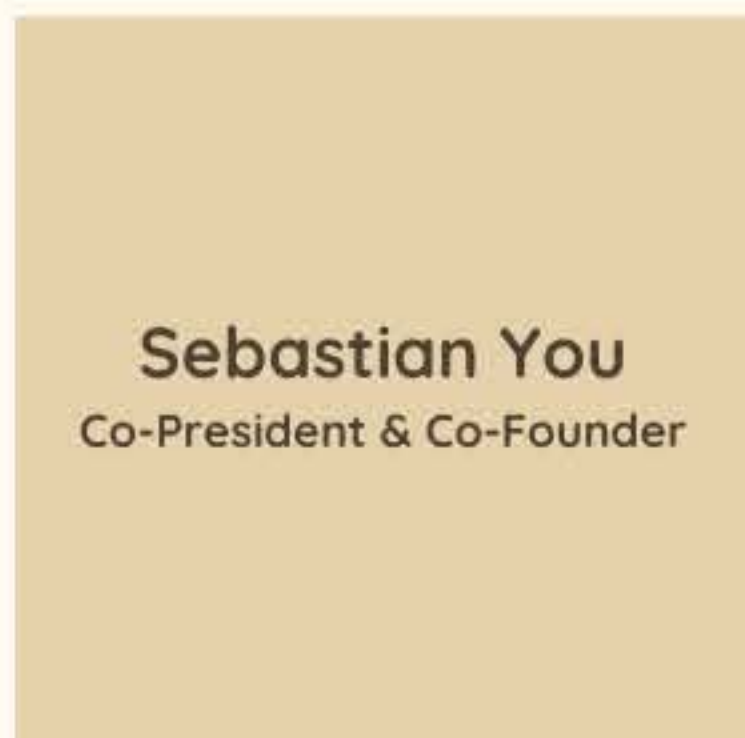

Who Are We?

The BTEC DSC is a council dedicated to the biotechnology specialization, a close-knit program within the biology department. We are focused on providing a meaningful, connected, and enriching experience in the biotechnology program. Our aim is to create a welcoming space where you can find support, share knowledge, and collaborate with peers who share your passion for biotechnology!

What Do We Do?

Our mission is to unite biotechnology students, faculty, and industry professionals through targeted academic and professional events. We provide study sessions and workshops designed to support your academic success. For career exploration, our networking nights and "Careers in BTEC" events connect you with experts and highlight biotech-specific opportunities. Additionally, our social events—such as trivia nights, mixers, and casual meet-ups—create a relaxed space to connect with fellow BTEC students and faculty. Together, these events foster a strong community where you can share experiences, gain insights, and build lasting friendships within the program.

Why Join Us?

Joining the BTEC DSC gives you direct access to academic resources, specialized career connections, and a strong support network in a smaller but vibrant community. In biotech, every voice matters, and we are here to ensure everyone feels engaged and valued. Being a part of the BTEC DSC is about making the most of your specialization and feeling a true sense of belonging within the program.

Stay Updated!
